FOREWORD

Since 1951 the scientific diving community had endeavored to promote safe, effective diving through self-imposed diver training and education programs. Over the years, manuals for diving safety have been circulated between organizations, revised and modified for local implementation, and have resulted in an enviable safety record. Scientific diving was exempted from the OSHA Commercial Diving Regulations upon the evidence of genuine self-control in the scientific community.

This document is drawn from the American Academy of Underwater Sciences (AAUS) Manual for Scientific Diving Certification and Operations of Scientific Diving Programs. The AAUS document represents the minimum safety standards for scientific diving at the present day.

The policies, procedures and standards set forth in this Diving Safety Manual are intended to govern the training and diving operations of all personnel participating in the Certified Scientific Diving Program at the University of California, Davis. It applies to all divers operating under University auspices, including visiting divers, and to those campus officers responsible for the administration of the SCUBA program.

Jason S. Herum
UC Davis Diving Safety Officer

SECTION 1.00
GENERAL POLICY

1.10  THE SCIENTIFIC DIVING STANDARDS

Purpose

The purpose of these Scientific Diving Standards is to ensure scientific diving is conducted in a manner that will maximize the protection of scientific divers from accidental injury and/or illness, and to set forth standards for training and certification that will allow a working reciprocity between Organizational Members (OMs or OM). Fulfillment of these purposes shall be consistent with the furtherance of research and safety, and facilitation of collaborative opportunities between AAUS OMs.

This Manual sets minimum standards for the establishment of American Academy of Underwater Sciences (AAUS) recognized scientific diving programs, the organization for the conduct of these programs, and the basic regulations and procedures for safety in scientific diving operations. It also establishes a framework for reciprocity between AAUS OMs that adhere to these minimum standards.

Historical Perspective

This Manual was developed and written by AAUS by compiling the policies set forth in the diving manuals of several university, private, and governmental scientific diving programs. These programs share a common heritage with the scientific diving program at the Scripps Institution of Oceanography (SIO). Adherence to the SIO standards has proven both feasible and effective in protecting the health and safety of scientific divers since 1954.

In 1982, OSHA exempted scientific diving from commercial diving regulations (29CFR1910, Subpart T) under certain conditions that are outlined below. The final guidelines for the exemption became effective in 1985 (Federal Register, Vol. 50, No.6, p.1046). AAUS is recognized by OSHA as the scientific diving standard setting organization.

Scientific Diving Definition

Scientific diving is defined (29CFR1910.402) as:

“Diving performed solely as a necessary part of a scientific, research, or educational activity by employees whose sole purpose for diving is to perform scientific research tasks. Scientific diving does not include performing any tasks usually associated with commercial diving such as: Placing or removing heavy objects underwater; inspection of pipelines and similar objects; construction; demolition; cutting or welding; or the use of explosives.”
Scientific Diving Exemption

The two elements that a diving program must contain as defined by OSHA in 29 CFR 1910 Subpart T 1910.401(a)(2)(iv) are:

a) Diving safety manual which includes at a minimum: Procedures covering all diving operations specific to the program; procedures for emergency care, including recompression and evacuation; and criteria for diver training and certification.

b) Diving control (safety) board, with the majority of its members being active divers, which must at a minimum have the authority to: Approve and monitor diving projects; review and revise the diving safety manual; assure compliance with the manual; certify the depths to which a diver has been trained; take disciplinary action for unsafe practices; and, assure adherence to the buddy system (a diver is accompanied by and is in continuous contact with another diver in the water) for SCUBA diving.

OSHA has granted an exemption for scientific diving from commercial diving regulations under the following guidelines (Appendix B to 29 CFR 1910 Subpart T):

- The Diving Control Board consists of a majority of active scientific divers and has autonomous and absolute authority over the scientific diving program’s operation.
- The purpose of the project using scientific diving is the advancement of science; therefore, information and data resulting from the project are non-proprietary.
- The tasks of a scientific diver are those of an observer and data gatherer. Construction and trouble-shooting tasks traditionally associated with commercial diving are not included within scientific diving.
- Scientific divers, based on the nature of their activities, must use scientific expertise in studying the underwater environment and therefore, are scientists or scientists-in-training.

Recommendations for Changes to AAUS Manual

As part of each OMs annual report, recommendations for modifications of this Manual must be submitted to AAUS for consideration.

Liability

In adopting the policies set forth in this manual, the University assumes no liability not otherwise imposed by law. Each diver is assumed under this policy to be voluntarily performing activities for which he/she assumes all risks, consequences, and potential liability.

Release and Waiver

All students and other personnel (other than University employees) diving under University auspices shall execute a release holding the Regents harmless from any claims which might arise.
1.20 OPERATIONAL CONTROL
University Auspices and Responsibilities

UCD auspices include any scientific diving operation in which UCD is connected because of ownership of life support equipment used, locations selected, or relationship with the associated individual(s). This includes all cases involving the operations of authorized individuals of UCD or auxiliary organizations, where such individuals are acting within the scope of their authorization.

It is UCD’s responsibility to adhere to the AAUS Standards for Scientific Diving Certification and Operation of Scientific Diving Programs. The administration of the local diving program will reside with the DSO in consultation with the UCD Diving Control Board. The regulations herein shall be observed at all locations where scientific diving is conducted.

The Diving Safety Manual

UCD shall develop and maintain a Diving Safety Manual (DSM), which provides for the development and implementation of policies and procedures that will enable UCD to meet requirements of local environments and conditions as well as to comply with the AAUS minimum standards.

Diving Control Board

- The DCB shall consist of a majority of active scientific divers. Membership shall consist of three faculty, one staff, and one student representative. The Chair of the Board shall be a faculty member, and will represent the Vice Chancellor-Research. Other members will be the Diving Safety Officer, a physician who is familiar with diving medicine (The Diving Medical Officer), a representative of the UCD instructional staff, the Senior Divers at the TERC, SeaDoc, and BML. A secretary may be chosen from the membership of the board according to DCB procedures.
- Has autonomous and absolute authority over the scientific diving program’s operation.
- The DCB must:
  - Establish additional standards, protocols, and operational procedures beyond the AAUS minimums to address specific needs and concerns.
  - Approve and monitor diving projects.
  - Review and revise the diving safety manual.
  - Ensure compliance with the diving safety manual.
  - Approve the depth to which a diver has been authorized to dive.
  - Take disciplinary action for unsafe practices.
  - Ensure adherence to the buddy system for scientific diving.
  - Act as the official representative of UCD in matters concerning the scientific diving program.
  - Act as a board of appeal to consider diver-related problems.
  - Recommend the issue, reissue, or the revocation of diving authorizations.
  - Recommend changes in policy and amendments to AAUS and UCD’s diving safety manual as the need arises.
  - Establish and/or approve training protocols or standards through which the applicants for authorization can satisfy the requirements of UCD’s diving safety manual.
o Suspend diving operations considered to be unsafe or unwise.
o Establish criteria for equipment selection and use.
o Recommend new equipment or techniques.
o Establish and/or approve facilities for the inspection and maintenance of diving and associated equipment.
o Ensure that UCD’s air station(s) meet air quality standards as described in this manual.
o Periodically review the DSO’s performance and program.
o Investigate diving incidents within the UCD’s diving program or violations of UCD’s diving safety manual.

- The DCB may delegate operational oversight for portions of the program to the DSO; however, the DCB may not abdicate responsibility for the safe conduct of the diving program.

**Diving Safety Officer**

The Diving Safety Officer (DSO) serves as a voting member of the DCB, and should be designated one of the OM Representatives to AAUS. This person should have broad technical expertise and experience in research related diving.

Qualifications:

1. Must be an active scuba instructor from an internationally recognized certifying agency.
2. Must be appointed by the responsible administrative officer or designee, with the advice and counsel of the DCB.
3. Must qualify as a Full Voting Member of AAUS as defined by AAUS Bylaws:
   “(a) Holds a diving certification from a recognized national certifying agency or equivalent, and
   (b) Has engaged in sustained or successive scientific diving activities during the past two years, or
   (c) Has completed a course in scientific diving that meets the requirements as specified by the most current edition of the AAUS Standards for Scientific Diving.”
4. Must attend an AAUS DSO Orientation within one year of accepting a position at UCD, unless he/she has served as a DSO for another current AAUS OM within the last year.

Duties and Responsibilities

1. Answers, through the DCB, to the appropriate administrative officer or designee, for the conduct of the scientific diving program at UCD.
2. If delegated by the DCB, the routine operational authority for this program rests with the DSO. This oversight includes, but is not limited to: training,
dive authorizations, approval of dive plans, maintenance of diving records, and ensuring compliance with this Manual.

3. May permit some duties and responsibilities to be carried out by a qualified delegate, with the approval of the DCB.

4. Must be guided in the performance of the required duties by the advice of the DCB, but operational responsibility for the conduct of the scientific diving program will be retained by the DSO.

5. Must suspend diving operations determined to be unsafe or unwise

**Instructional Personnel**

All personnel involved in diving instruction under the auspices of UC Davis shall be qualified for the type of instruction being given, and hold active leadership certification from a nationally recognized training agency. Instructional personnel will be selected by the responsible administrative officer, or her/his designee, who will solicit the advice of the DCB in conducting preliminary screening of applicants for instructional positions.

**Reciprocity and Visiting Scientific Diver**

- Two or more AAUS OMs engaged jointly in diving activities, or engaged jointly in the use of diving resources, must designate one of the participating DCBs to govern the joint dive project. However, responsibility for individual divers ultimately resides with the home institution.
- A Scientific Diver from one OM must apply for permission to dive under the auspices of another OM by submitting to the DSO of the host OM a document containing all the information listed in Appendix 6, signed by the DSO or designee of the home DCB.
- A visiting Scientific Diver may be asked to demonstrate their knowledge and skills for the planned dive.
- If a host OM denies a visiting Scientific Diver permission to dive, the host DCB must notify the visiting Scientific Diver and their DCB with an explanation of all reasons for the denial.

**Waiver of Requirements**

The DCB may grant a waiver for specific requirements of training, examinations, depth authorizations, and minimum activity to maintain authorizations. AAUS medical standards may not be waived.

**1.30 Consequence of Violation of Regulations by Scientific Divers**

Failure to comply with the regulations of the UCD’s diving safety manual may be cause for the restriction or revocation of the diver’s scientific diving authorization by action of the UCD DCB.
1.40 Consequences of Violation of Regulations by Organizational Members

Failure to comply with the regulations of this Manual may be cause for the restriction or revocation of the UCD’s recognition by AAUS.

1.50 Record Maintenance

UCD must maintain consistent records for its diving program and for each participant. These records include but are not limited to: diving safety manual; equipment inspection, testing, and maintenance records; dive plans (project and/or individual); records of dive (project and/or individual); medical approval to dive; diver training records; diver authorization(s); individual dive log; dive incident reports; reports of disciplinary actions by the DCB; and other pertinent information deemed necessary by the DCB.

Availability of Records:

- Medical records must be available to an attending physician of a diver or former diver when released in writing by the diver.
- Records and documents required by this Manual must be retained for the following period:

  1. Diving safety manual – Current document only.
  2. Equipment inspection, testing, and maintenance records – Minimum current entry or tag.
  3. Records of Dive – minimum of 1 year, except 5 years where there has been an incident of pressure-related injury.
  4. Medical approval to dive – Minimum of 1 year past the expiration of the current document except 5 years where there has been an incident of pressure-related injury.
  5. Diver training records – Minimum of 1 year beyond the life of the diver’s program participation.
  6. Diver authorization(s) – Minimum of 1 year beyond the life of the diver’s program participation.
  7. Pressure-related injury assessment - 5 years.
  8. Reports of disciplinary actions by the DCB – Minimum of 1 year beyond the life of the diver’s program participation.
SECTION 2.00  DIVING REGULATIONS

2.10 Introduction

No person shall engage in scientific diving operations under the auspices of the UCD scientific diving program unless they are authorized pursuant to the provisions of this Manual.

2.20 Pre-Dive Procedures

Dive Plans

Before conducting any diving operations under the auspices of UCD, a dive plan for the proposed project or dive must be formulated and submitted for approval by the DCB or designee. Dives should be planned around the competency of the least experienced diver. The dive plan (project or individual) should include the following:

- Diving Mode(s) and Gas(es)
- Divers’ authorizations
- Approximate number of proposed dives
- Location(s) of proposed dives
- Estimated depth(s) and bottom time(s) anticipated
- Decompression status and repetitive dive plans, if required
- Proposed work, equipment, and boats to be employed
- Any hazardous conditions anticipated
- Emergency Action Plan (Appendix 7)
- In water details of the dive plan should include:
  - Dive Buddy assignments and tasks
  - Goals and objectives
  - Maximum depth(s) and bottom time
  - Gas management plan
  - Entry, exit, descent and ascent procedures
  - Perceived environmental and operational hazards and mitigations
  - Emergency and diver recall procedures

Diver Responsibility and Refusal to Dive

The decision to dive is that of the diver. The ultimate responsibility for safety rests with the individual diver. It is the diver’s responsibility and duty to refuse to dive, without fear of penalty, if in his/her judgment, conditions are unsafe or unfavorable, or if he/she would be violating the precepts of regulations in this Manual.

No dive team member will be required to be exposed to hyperbaric conditions against his/her will.

No dive team member may dive for the duration of any known condition, which is likely to adversely affect the safety and health of the diver or other dive team members.
Pre-dive Safety Checks

- Prior to commencing the dive, the team must assure that every team member is healthy, fit, and trained for the type of dive that is being attempted.
- Scientific divers must conduct a functional check of their diving equipment in the presence of the dive buddy or tender. They must ensure the equipment is functioning properly and suitable for the type of diving operation being conducted.
- Each diver must have the capability of achieving and maintaining positive buoyancy at the surface.
- Environmental conditions at the site will be evaluated prior to entering the water.

Pre-dive Briefings

Before conducting any diving operations under the auspices of UCD, the dive team members must be briefed on:

- Dive Buddy assignments and tasks
- Dive objectives.
- Maximum depth(s) and bottom time
- Turn around pressure and required surfacing pressure
- Entry, exit, descent and ascent procedures
- Perceived environmental and operational hazards and mitigations
- Emergency and diver recall procedures

Emergency Procedures

Scientific diving shall not be conducted unless the emergency plan information is complete and has been approved by the DSO. The lead diver must ensure that first aid emergency, communication devices and oxygen administration equipment are in working order and available as described within the emergency plan.

2.30 Diving Procedures

Lead Diver/Diver-in Charge

For each dive, one individual shall be designated as the lead diver. This person shall be at the dive location during the entire diving operation. The lead diver shall be responsible for:

A. Coordination. Diving shall be coordinated with other known activities in the vicinity which are likely to affect diving operations. The lead diver shall suspending diving operations if in his/her opinion conditions are not safe.

C. Briefing. The dive team members shall be briefed on:
   1. Dive objectives;
   2. Unusual hazards or environmental conditions likely to affect the safety of the diving operation;
3. Modifications to diving or emergency procedures necessitated by the specific diving operation; and,
4. Reporting any physical problems or adverse physiological effects, including symptoms of pressure related injuries.

D. Dive Planning. Planning of a diving operation shall in accordance of this manual and include considerations of the safety and health aspects of the divers.
   1. Diving mode;
   2. Surface and underwater conditions and hazards;
   3. Breathing gas supply;
   4. Thermal protection;
   5. Diving equipment;
   6. Ensuring all dive team members are qualified for the type of diving operations.
   7. Residual inert gas status of dive team members;
   8. Decompression schedules and altitude corrections; and,

E. Emergency Equipment. The lead diver must ensure that emergency equipment is present.

Buddy Diving Requirements and Solo Diving Prohibition

All diving activities shall assure adherence to the buddy system (two or three suitably equipped divers that shall be in effective communication throughout the dive). This buddy system is based upon mutual assistance, especially in the case of an emergency. Exceptions to this policy may be made by the DSO/DCB, particularly in the case of surface supported diving and diving in overhead environments.

Termination of the Dive

Any dive must be terminated while there is still sufficient cylinder pressure to permit the diver to safely reach the surface, including decompression time, or to safely reach an additional air source at the decompression station.

It is the responsibility of the diver to terminate the dive that he/she considers unsafe, without fear of reprisal, in a way that does not compromise the safety of another diver already in the water.

Emergencies and Deviations from Regulations

Any diver may deviate from the requirements of this Manual to the extent necessary to prevent or minimize a situation likely to cause death, serious physical harm, or major environmental damage. A written report must be submitted to the DCB explaining the circumstances and justifications.

Enclosed or Confined Spaces

Where an enclosed or confined space is not large enough for two divers, a diver shall be stationed at the underwater point of entry and an orientation line shall be used.
**Dive Flags**

A dive flag shall be displayed prominently over the dive site whenever diving is conducted.

**Dive Computers and Dive Tables**

The use of dive computers or dive tables as a means of determining decompression status is required for all dives conducted under the auspices of UC Davis. The use of a dive computer should follow the UCD recommendations on dive computers.

**Depth Limits**

A. Each scientific diver shall be certified to a specific depth limit by the DSO.

B. Each scientific diver diving under the auspices of the Consortium shall not exceed their depth authorization, unless accompanied by a diver certified to a greater depth. Under these circumstances the diver may not exceed his/her depth limit by more than one step.

2.40 Post-Dive Procedures

**Post-Dive Safety Checks**

After the completion of a dive, each diver must report any physical problems, symptoms of decompression sickness, or equipment malfunctions to the Lead Diver, DSO, and/or DCB.

It is the responsibility of each buddy team member to inform the Lead Diver if they have any concerns with aspects of the dive operation as conducted during the dive. Operations will not continue until those concerns have been addressed to the satisfaction of the buddy team and Lead Diver. If needed, the team should contact the DSO for assistance in addressing any concern/s with the dive operation.

2.50 Emergency Procedures

Each dive project leader will develop emergency procedures which follow the standards of care of the community and must include procedures and implementation criteria for emergency care, recompression, evacuation, and incident reporting.

2.60 Flying after Diving or Ascending to Altitude (Over 1000 feet/304 meters)

- Following a Single No-Decompression Dive: Divers should have a minimum preflight surface interval of 12 hours.
- Following Multiple Dives per Day or Multiple Days of Diving: Divers should have a minimum preflight surface interval of 18 hours.
- Following Dives Requiring Decompression Stops: Divers should have a minimum preflight surface interval of 24 hours.
- Before Ascending to Altitude Above 1000 feet (304 meters): Divers should follow the appropriate guideline for preflight surface intervals unless the decompression procedure used has accounted for the increase in elevation.
2.70 Record Keeping Requirements

Personal Diving Log

Each authorized scientific diver must log every dive made under the auspices of the UCD’s program and is encouraged to log all other dives. Dives should be logged into Webdiver at the earliest reasonable opportunity but no later than 1 month following the dive. The dive log shall include at least the following:

• Name of diver and buddy
• Date, time, and location
• Diving modes used
• General nature of diving activities
• Maximum depth and dive time
• Diving tables or computers used
• Detailed report of any near or actual incidents

Required Incident Reporting

All diving incidents shall be reported to the UCD DSO in a timely manner. All occupational injuries and illnesses should follow established UCD procedures for incident reporting, including those required by the AAUS and the appropriate Labor Code section. The report will specify the circumstances of the incident and the extent of any injuries or illnesses. The DCB shall investigate and document any incident of pressure related injury and prepare a report that is to be forwarded to AAUS during the annual reporting cycle.

• If pressure-related injuries are suspected, or if symptoms are evident, the following additional information must be recorded and retained by the OM, with the record of the dive, for a period of 5 years:

• Written descriptive report shall include:
  • Name, address, phone numbers of the principal parties involved.
  • Summary of experience of divers involved.
  • Location, description of dive site, and description of conditions that led up to incident.
  • The circumstances of the incident and the extent of any injuries or illnesses.
  • Description of symptoms, including depth and time of onset.
  • Description and results of treatment.
  • Disposition of case.
  • Recommendations to avoid repetition of incident.

• The DCB shall investigate and document any incident of pressure-related injury and prepare a report, which is to be forwarded to the AAUS during the annual reporting cycle. This report shall first be reviewed and released by the UCD DCB.
SECTION 3.00 DIVING EQUIPMENT

3.10 General Policy
All equipment must meet standards as determined by the DSO and the DCB. All equipment must be regularly examined by the person using it and serviced according to manufacturer recommendations. Equipment that is subjected to extreme usage under adverse conditions should require more frequent testing and maintenance.

3.20 Equipment
The UCD DCB must establish the minimum equipment configuration for all dives.

Regulators and Gauges
● Scuba regulators and gauges shall be inspected by the diver prior to each use. Regulators and gauges should be functionally inspected/tested at intervals not to exceed 12 months. The regulator first and second stages should also be serviced at a minimum every two years, or per manufacturer’s recommendations.

● Standard open circuit (OC) regulator configuration is:
  ○ A first stage
  ○ Primary 2\textsuperscript{nd} stage
  ○ Back up 2\textsuperscript{nd} stage
  ○ Submersible Pressure Gauge (SPG)
  ○ Inflator hose for a Buoyancy Compensator Device

● A Full Face Mask may be used in place of the primary 2\textsuperscript{nd} stage according to manufacturer’s recommendations

Equipment for Determination of Decompression Status
● Each member of the buddy team must have an underwater timing device and depth indicator, or dive computer
● If dive tables are being used a set must be available at the dive location
● If a dive computer is used the diver must use the same computer used on repetitive dives.
● In an aquarium or other manmade structure of a known maximum obtainable depth:
  ○ A depth indicator is not required, except when a diver’s decompression status must be taken into consideration on repetitive dives.
  ○ Only one buddy must be equipped with a timing device.
  ○ The maximum obtainable depth of the aquarium must be used as the diving depth.

Scuba Cylinders
● Scuba cylinders must be designed, constructed, and maintained in accordance with the applicable provisions of the Unfired Pressure Vessel Safety Orders.
● Scuba cylinders must be hydrostatically tested in accordance with DOT standards.
● Scuba cylinders must have an internal and external inspection at intervals not to exceed 12 months.
● Scuba cylinder valves must be functionally tested at intervals not to exceed 12 months.
Buoyancy Compensation Devices (BCD)

- Each diver must have the capability of achieving and maintaining neutral buoyancy underwater and positive buoyancy at the surface.
- BCDs, dry suits, or other variable volume buoyancy compensation devices must be equipped with an exhaust valve.
- These devices must be functionally inspected and tested at intervals not to exceed 12 months.
- BCDs, dry suits, or other variable volume buoyancy compensation devices must not be used as a lifting device in lieu of lift bags.

3.30 Auxiliary Equipment

Handheld Underwater Power Tools

- Power tools and equipment used underwater must be specifically approved for this purpose.
- Tools and equipment supplied with power from the surface must be de-energized before being placed into or retrieved from the water.
- Handheld power tools must not be supplied with power from the dive location until requested by the diver.

3.40 Support Equipment

First Aid Supplies

- A first aid kit and emergency oxygen appropriate for the diving being conducted must be available at the dive site.

Diver’s Flag

- A diver’s flag must be displayed prominently whenever diving is conducted under circumstances where required or where water traffic is probable.

Compressor Systems – UC Davis Controlled

The following will be considered in design and location of compressor systems:

- Low-pressure compressors used to supply air to the diver if equipped with a volume tank must have a check valve on the inlet side, a relief valve, and a drain valve.
- Compressed air systems over 500 psig must have slow-opening shut-off valves.
- All air compressor intakes must be located away from areas containing exhaust or other contaminants.

3.50 Equipment Maintenance

Record Keeping

Each equipment modification, repair, test, calibration, or maintenance service must be logged, including the date and nature of work performed, serial number of the item (if applicable), and the name of the person performing the work for the following equipment:

- Regulators
- Gauges (SPG, Depth Gauges, Timers, and Dive Computers)
- BCDs
- Dry suits
- Scuba cylinders and valves
- Full Face Masks
- Compressors, air filtration systems, gas control panels, and storage banks
- Surface supplied equipment
- Rebreather systems
- Additional equipment categories as determined by the DCB

**Compressor Operation and Air Test Records**

Gas analyses and air tests must be performed on each OM-controlled breathing air compressor at regular intervals of no more than 100 hours of operation or 6 months, whichever occurs first. The results of these tests must be entered in a formal log and be maintained.

**3.60 Air Quality Standards**

**Breathing Gas**

Breathing gas must meet the following specifications as set forth by the Compressed Gas Association (CGA Pamphlet G-7.1; see table below).

<table>
<thead>
<tr>
<th>Component</th>
<th>Maximum</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oxygen</td>
<td>20 - 22%/v</td>
</tr>
<tr>
<td>Carbon Monoxide</td>
<td>10 PPM/v</td>
</tr>
<tr>
<td>Carbon Dioxide</td>
<td>1000 PPM/v</td>
</tr>
<tr>
<td>Condensed Hydrocarbons</td>
<td>5 mg/m3</td>
</tr>
<tr>
<td>Total Hydrocarbons as Methane</td>
<td>25 PPM/v</td>
</tr>
<tr>
<td>Water Vapor ppm</td>
<td>(2)</td>
</tr>
<tr>
<td>Objectionable Odors</td>
<td>None</td>
</tr>
</tbody>
</table>

For breathing air used in conjunction with self-contained breathing apparatus in extreme cold where moisture can condense and freeze, causing the breathing apparatus to malfunction, a dew point not to exceed -50°F (63 pm v/v) or 10 degrees lower than the coldest temperature expected in the area is required.

**Remote Operations**

For remote site operations using gas sources not controlled by the UC Davis, every effort should be made to verify breathing gas meets the requirements of this standard. If CGA Grade E gas is not verifiable, the DCB shall develop a protocol to mitigate risk to the diver.
SECTION 4.00 SCIENTIFIC DIVER TRAINING REQUIREMENTS

GENERAL POLICY

Set forth, below, are the training requirements for UCD Scientific Diver certification. No person shall engage in scientific diving activities under the auspices of UCD until the DSO, acting on behalf of the DCB, has issued a Scientific Diving Authorization and approved a submitted UCD Dive Plan.

Submission of documents and participation in aptitude examinations does not automatically result in certification. The applicant must convince the DSO that he/she is sufficiently skilled and proficient to be certified by the DCB. Any applicant who does not possess the necessary judgment, under diving conditions, for the safety of the diver and his/her partner, may be denied UCD Scientific Diver privileges.

4.10 PREREQUISITES

Eligibility
A. Only persons diving under UCD auspices are eligible for UCD Scientific Diver training and certification. Generally, these people will be affiliated with UCD however non-affiliated trainees may be admitted to the training program with the permission of the DCB.

B. The applicant for training and certification should be at least eighteen years of age, have at least entry level SCUBA training from an internationally recognized agency and at a minimum of 12 logged dives since the entry level training was completed.

Application

Application for certification should be submitted to the DSO on the UCD Scientific Diver Application form available UCD's Dive Safety Website

Medical Examination

The candidate shall be medically qualified for diving as described by American Academy of Underwater Sciences medical standards and these may not be waived.

Swimming/Watermanship Evaluation

The candidate must demonstrate the following in the presence of the DSO or designee. All tests are to be performed without swim aids. However, where exposure protection is needed, the candidate must be appropriately weighted to provide for neutral buoyancy.

a) Swim underwater for a distance of 25 yards (23 meters) without surfacing.

b) Swim 400 yards (366 meters) in less than 12 minutes.

c) Tread water for 10 minutes, or 2 minutes without the use of hands.

d) Transport a passive person of equal size a distance of 25 yards (23 meters) in the water.
4.20 Training

The candidate must successfully complete prerequisites, theoretical aspects, practical training, and examinations for a minimum cumulative time of 100 hours and a minimum of 12 open water dives. Theoretical aspects must include principles and activities appropriate to the intended area of scientific study. Formats for meeting the 100 hour training requirement include a formalized training course, or a combination of formalized and on the job training.

When a diver’s resume provides clear evidence of significant scientific diving experience, the diver can be given credit for meeting portions of the 100 hour course requirements. The DCB will identify specific overlap between on-the-job training, previous scientific diving training/experience and course requirements, and then determine how potential deficiencies will be resolved. However, UCD cannot “test-out” divers, regardless of experience, when they have no previous experience in scientific diving.

Any candidate who does not convince the DCB, through the DSO, that they possess the necessary judgment, under diving conditions, for the safety of the diver and his/her buddy, may be denied UCD scientific diving privileges.

### Practical Training / Skill Development

<table>
<thead>
<tr>
<th>Confined Water</th>
<th>At the completion of training, the trainee must satisfy the DSO or DCB-approved designee of their ability to perform the following, as a minimum, in a pool or in sheltered water:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Enter water fully equipped for diving</td>
</tr>
<tr>
<td></td>
<td>• Clear fully flooded face mask</td>
</tr>
<tr>
<td></td>
<td>• Demonstrate air sharing and ascent using an alternate air source, as both donor and recipient, with and without a face mask</td>
</tr>
<tr>
<td></td>
<td>• Demonstrate buddy breathing as both donor and recipient, with and without a face mask</td>
</tr>
<tr>
<td></td>
<td>• Demonstrate understanding of underwater signs and signals</td>
</tr>
<tr>
<td></td>
<td>• Demonstrate ability to remove and replace equipment while submerged</td>
</tr>
<tr>
<td></td>
<td>• Demonstrate acceptable watermanship skills for anticipated scientific diving conditions</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Open Water Skills</th>
<th>The trainee must satisfy the DSO, or DCB-approved designee, of their ability to perform at least the following in open water:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Surface dive to a depth of 10 feet (3 meters) without scuba*</td>
</tr>
<tr>
<td></td>
<td>• Enter and exit water while wearing scuba gear* ^^^</td>
</tr>
</tbody>
</table>
- Kick on the surface 400 yards (366 meters) while wearing scuba gear, but not breathing from the scuba unit*
- Demonstrate proficiency in air sharing ascent as both donor and receiver*
- Demonstrate the ability to maneuver efficiently in the environment, at and below the surface* ^^
- Complete a simulated emergency swimming ascent*
- Demonstrate clearing of mask and regulator while submerged*
- Underwater communications^^
- Demonstrate ability to achieve and maintain neutral buoyancy while submerged*
- Demonstrate techniques of self-rescue and buddy rescue*
- Navigate underwater ^
- Plan and execute a dive^
- Demonstrate judgment adequate for safe scientific diving* ^^

**Rescue Skills:**
- Rescue from depth and transport 25 yards (23 meters), as a diver, a passive simulated victim of an accident: surface diver, establish buoyancy, stabilize victim
- Demonstrate simulated in-water mouth-to-mouth resuscitation
- Removal of victim from water to shore or boat
- Stressed and panicked diver scenarios
- Recommendations For Rescue Of A Submerged Unresponsive Compressed-Gas Diver – Appendix 9

Successfully complete a minimum of one checkout dive and at least eleven additional open water dives in a variety of dive sites, for a cumulative surface to surface time of 6 hours. Dives following the checkout dive(s) may be supervised by an active Scientific Diver holding the necessary depth authorization experienced in the type of diving planned, and with the knowledge and permission of the DSO

The eleven dives (minimum) following the initial checkout dive may be conducted over a variety of depth ranges as specified by the OM DCB. Depth progression must proceed shallower to deeper after acceptable skills and judgement have been demonstrated, and are not to exceed 100 feet (30 m) during the initial 12 dive cycle

* Checkout dive element
^^ Evaluated on all dives
^ Evaluated at some point during the training cycle

</tr>
</tbody>
</table>

| Written Exams | The trainee must pass a written examination reviewed and approved by the OM DCB that demonstrates knowledge of at least the following: |
4.30 Diver Certification and Authorizations

Only a person diving under the auspices of an UCD that subscribes to the practices of the AAUS is eligible for a scientific diver certification.

**Diver-In-Training (DIT) Authorization**

This is an authorization to dive, usable only while it is current and for the purpose intended. This authorization signifies that a diver has completed and been certified as at least an entry level diver through an internationally recognized certifying agency and has the knowledge skills and experience necessary to commence and continue training as a scientific diver under supervision, as approved by the DCB. DIT status must only be used when the diver is on his/her way to becoming certified as a scientific diver. While it is recommended for DIT’s to have hands-on scientific diver experience during their training, the DIT status is intended to be a temporary authorization, not a substitute for Scientific Diver Certification.

**Scientific Diver Certification**

Signifies a diver has completed all requirements in Section 4.20 and is certified by UCD to engage in scientific diving without supervision, as approved by the DCB through the DSO. Submission of documents and participation in aptitude examinations does not automatically result in certification. To be certified, the applicant must demonstrate to the DCB, through the DSO, that s/he is sufficiently skilled and proficient, and possess the necessary judgement for their safety and/or that of the dive team. Scientific Diver Certification is only active when required authorizations are in place and current.

**Scientific Aquarium Diver Certification**

Scientific Aquarium Diver is a certification authorizing the diver to participate in scientific diving solely in the aquarium environment.

All requirements set forth for Scientific Diver certification must apply, except follows:
• Practical training must include at least 12 supervised aquarium dives for a cumulative bottom time of 6 hours.

• Training requirements for navigation and 400-yard (366-meter) surface swim in scuba gear may be waived at the discretion of the DCB.

**Temporary Diver Authorization**

Only a diver not under the auspices of an AAUS OM may be granted a Temporary Diver Authorization. The individual in question must demonstrate proficiency in diving and can contribute measurably to a planned dive. A Temporary Diver Authorization constitutes a waiver of selected requirements of Section 4.0 and is valid only for a limited time, as approved by the DCB. A Temporary Diver Authorization must be restricted to the planned diving operation and must comply with all other policies, regulations, and standards of this Manual, including medical requirements. This authorization is not to be utilized as a repeated mechanism to circumvent existing standards set forth in this Manual.

**4.40 Depth Authorizations**

**Depth Ratings and Progression to Next Depth Level**

Indicates the maximum depth in which a diver can conduct science and may supervise other divers holding a lesser depth authorization. A scientific diver requires a valid depth authorization to be considered active.

A diver may be authorized to the next depth level after successfully completing the requirements for that level. A diver may exceed his/her depth authorization when accompanied and supervised by a dive buddy holding a depth authorization greater or equal to the intended depth. Dives must be planned and executed with the permission of the DCB or designee. In the event a diver within UCD does not hold an authorization at the desired next level, the DCB may authorize a required progression or procedure for a diver to attain a deeper authorization. If local conditions do not conform to traditional AAUS depth progressions, the DCB may devise a reasonable accommodation. However, the total number of dives to obtain a given depth authorization must follow the cumulative number of dives listed below.

a) Authorization to 30 Foot Depth - Initial science diver depth authorization, approved upon the successful completion of training listed in Section 4. Cumulative minimum supervised dives: 12.

b) Authorization to 60 Foot Depth - A diver holding a 30-foot authorization may be authorized to a depth of 60 feet after successfully completing and logging 12 supervised dives to depths between 31 and 60 feet under supervision of a diver authorized by the DCB, for a minimum total time of 4 hours. Cumulative minimum supervised dives: 24.

c) Authorization to 100 Foot Depth - A diver holding a 60-foot authorization may be authorized to a depth of 100 feet after successfully completing and logging 6 supervised dives to depths between 61 and 100 feet under supervision of a dive buddy authorized by the DCB. The diver must also demonstrate proficiency in the use of the appropriate decompression profiling method. Cumulative minimum supervised dives: 30.

d) Authorization to 130 Foot Depth - A diver holding a 100-foot authorization may be
authorized to a depth of 130 feet after successfully completing and logging 6 supervised dives to depths between 100 and 130 feet under supervision of a dive buddy authorized by the DCB. The diver must also demonstrate proficiency in the use of the appropriate decompression profiling method. Cumulative minimum supervised dives: 36.

e) Authorization beyond 130 foot Depth - Divers needing qualification to depths beyond 130ft must apply to the DCB. The diver must also demonstrate a knowledge of the special problems of deep diving, and of special safety requirements.

4.50 Maintaining Active Status

Minimum Activity to Maintain Authorizations

During any 12-month period, each scientific diver must log a minimum of 12 scientific, scientific training, or proficiency dives. At least one dive must be logged near the maximum depth, as defined by the DCB, of the diver’s authorization during each 6-month period. Failure to meet these requirements will result in revocation or restriction of authorization by the DSO under procedures established by the DCB.

Requalification of Authorization

Once the initial requirements of Section 4.40 are met, divers whose depth authorization has lapsed due to lack of activity may be requalified by procedures adopted by the DCB.

Medical Examination

All scientific divers must pass a medical examination at the intervals specified in this manual. A medically cleared diver experiencing any Conditions Which May Disqualify Candidates From Diving (Appendix 1) must receive clearance to return to diving from a physician before resuming diving activities. This medical examination requirement cannot be waived for any diver.

Emergency Care Training

The scientific diver must hold current training in the following:

- Adult CPR and AED
- Emergency oxygen administration
- First aid for diving accidents

4.60 Revocation of Authorization

An individual’s scientific diver certification can be restricted or revoked for cause by the DCB. Authorizations associated with an individual’s scientific diver certification may be restricted or suspended for cause by the DSO. Restrictions or suspensions issued by the DSO may be rescinded by the DSO; these issues will be reported to and reviewed by the DCB, and the outcomes or actions resulting from this review will be documented in the diver’s UCD record. Violations of regulations set forth in this Manual or other governmental subdivisions not in conflict with this Manual, or demonstration of poor judgement, may be considered cause. The DCB or designee must inform the diver in writing of the reason(s) for revocation. The diver will be given the opportunity to present their case in writing to the DCB for reconsideration. Following revocation, the diver may be reauthorized after complying with conditions the DCB may impose. All such written statements and requests, as identified in this section, are formal documents, and therefore part of the diver’s file.
SECTION 5.00  MEDICAL STANDARDS

5.10 Medical Requirements

General
- All medical evaluations required by this Manual must be performed by, or under the direction of, a licensed physician of the applicant-diver’s choice, preferably one trained in diving/undersea medicine.
- The diver should be free of any chronic disabling disease and any conditions contained in the list of conditions for which restrictions from diving are generally recommended. (Appendix 1)
- The DSO shall verify that divers have been declared by the examining medical authority to be fit to engage in diving activities.

5.20 Frequency of Medical Evaluations

<table>
<thead>
<tr>
<th>Medical evaluation must be completed:</th>
<th>Before Age 40</th>
<th>After age 40</th>
<th>Before Age 60</th>
<th>After Age 60</th>
</tr>
</thead>
<tbody>
<tr>
<td>Before a diver may begin diving, unless an equivalent initial medical evaluation has been given within the preceding 5 years</td>
<td>Before a diver may begin diving, unless an equivalent initial medical evaluation has been given within the preceding 3 years</td>
<td>Before a diver may begin diving, unless an equivalent initial medical evaluation has been given within the preceding 2 years</td>
<td></td>
<td></td>
</tr>
<tr>
<td>At 5-year intervals</td>
<td>At 3-year intervals</td>
<td>At 2-year intervals</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Clearance to return to diving must be obtained from a healthcare provider following a medically cleared diver experiencing any Conditions Which May Disqualify Candidates From Diving (Appendix 1), or following any major injury or illness, or any condition requiring chronic medication. If the condition is pressure related, the clearance to return to diving must come from a physician trained in diving medicine.

5.30 Information Provided Examining Physician

The diver shall provide a copy of the medical evaluation requirements of this Manual to the examining physician.

5.40 Content of Medical Evaluations

Medical examinations conducted initially and at the intervals specified in Section 5.20 must consist of the following:

1. UCD/AAUS Medical History
2. UCD/AAUS Diving physical examination w/ release for medical information to the DSO and DCB.

5.50 Physician’s Written Report

- A Medical Evaluation of Fitness for Scuba Diving Report (or OM equivalent) signed by the examining physician stating the individual’s fitness to dive, including any recommended restrictions or limitations will be submitted to the DSO for the diver’s
record after the examination is completed.

- The Medical Evaluation of Fitness for Scuba Diving Report will be reviewed by the DCB or designee and the diver’s record and authorizations will be updated accordingly.

- A copy of any physician’s written reports will be made available to the individual.

- It is the diver’s responsibility to provide to the DSO a written statement from the examining medical authority listing any restrictions, limitations, or clearances to dive resulting from medical examinations obtained by the individual outside of their normal diving medical examination cycle. These statements will be reviewed by the DCB or designee and the diver’s record and authorizations will be updated accordingly.
SECTION 6.00 NITROX DIVING

This section describes the requirements for authorization and use of nitrox for Scientific Diving.

6.10 Requirements for Nitrox Authorization

Prior to authorization to use nitrox, the following minimum requirements must be met:

Prerequisites

Only a certified Scientific Diver or DIT diving under the auspices of UCD is eligible for authorization to use nitrox.

Application for authorization to use nitrox must be made to the DCB. Submission of documents and participation in aptitude examinations does not automatically result in authorization to use nitrox. The applicant must convince the DCB through the DSO that they are sufficiently knowledgeable, skilled and proficient in the theory and use of nitrox for diving.

Training

In lieu of writing/promulgating AAUS specific training standards for Nitrox divers, AAUS references the standards for Nitrox diver training as defined by the WRSTC and/or ISO. AAUS programs who wish to train Nitrox divers may do so using one of the following options:

a) Under the auspices and standards of an internationally recognized diver training agency.

b) Under the auspices of AAUS using the minimum guidelines presented by the most current version of the RSTC/WRSTC and/or ISO Nitrox diver training standards.

References:

"Minimum Course Content for Enriched Air Nitrox Certification" - World Recreational Scuba Training Council (WRSTC), www.wrstc.com

"Recreational diving services- Requirements for training programs on enriches air nitrox (EAN) diving”. ISO 11107:2009 - International Organization for Standardization (ISO), www.iso.org

Practical Evaluation

- Oxygen analysis of nitrox mixtures.
- Determination of MOD, oxygen partial pressure exposure, and oxygen toxicity time limits, for various nitrox mixtures at various depths.
- Determination of nitrogen-based dive limits status by EAD method using air dive tables, and/or using nitrox dive tables, as approved by the DCB.
- Nitrox dive computer use may be included, as approved by the DCB.
- A minimum of three supervised open water dives using nitrox is required for authorization.
Written Evaluation

- Function, care, use, and maintenance of equipment cleaned for nitrox use.
- Physical and physiological considerations of nitrox diving (e.g., O2 and CO2 toxicity)
- Diving regulations, procedures/operations, and dive planning as related to nitrox diving
- Equipment marking and maintenance requirements
- Dive table and/or dive computer usage
- Calculation of: MOD, pO2, and other aspects of Nitrox diving as required by the DCB

6.20 Minimum Activity to Maintain Authorization

The diver should log at least one nitrox dive per year. Failure to meet the minimum activity level may be cause for restriction or revocation of nitrox authorization.

6.30 Operational Requirements

Oxygen Exposure Limits

- The inspired oxygen partial pressure experienced at depth should not exceed 1.6 ATA.
- The maximum allowable exposure limit should be reduced in cases where cold or strenuous dive conditions, or extended exposure times are expected.

Calculation of Decompression Status

- A set of DCB approved nitrox dive tables should be available at the dive site.
- Dive computers may be used to compute decompression status during nitrox dives. Manufacturers’ guidelines and operation instructions should be followed.
- Dive computers capable of pO2 limit and fO2 adjustment should be checked by the diver prior to the start each dive to ensure conformity with the mix being used.

Gas Mixture Requirements

- Only nitrox mixtures and mixing methods approved by the DCB may be used.
- UCD personnel mixing nitrox must be qualified and approved by the DCB for the method(s) used.
- Oxygen used for mixing nitrox should meet the purity levels for “Medical Grade” (U.S.P.) or “Aviator Grade” standards.
- In addition to the AAUS Air Purity Guidelines outlined in Section 3.60, any air that may come in contact with oxygen concentrations greater than 40% (i.e., during mixing), must also have a hydrocarbon contaminant no greater than .01 mg/m³.
- For remote site operations using compressors not controlled by the UCD where this is not verifiable, the DCB must develop a protocol to mitigate risk to the diver.
Analysis Verification by User

- Prior to the dive, it is the responsibility of each diver to analyze the oxygen content of his/her scuba cylinder. And acknowledge in writing the following information for each cylinder: fO$_2$, MOD, cylinder pressure, date of analysis, and user's name.

- Individual dive log reporting forms should report fO$_2$ of nitrox used, if different than 21%.

6.40 Nitrox Diving Equipment

Required Equipment

All of the designated equipment and stated requirements regarding scuba equipment required in the AAUS Manual apply to nitrox operations. Additional minimal equipment necessary for nitrox diving operations includes:

- Labeled SCUBA Cylinders in Accordance with Industry Standards
- Oxygen Analyzers
- Oxygen compatible equipment as applicable

Requirement for Oxygen Service

- All equipment, which during the dive or cylinder filling process is exposed to concentrations greater than 40% oxygen, should be cleaned and maintained for oxygen service.
- Any equipment used with oxygen or mixtures containing over 40% by volume oxygen must be designed and maintained for oxygen service. Oxygen systems over 125 psig must have slow-opening shut-off valves.

Compressor system

- Compressor/filtration system must produce oil-free air, or
- An oil-lubricated compressor placed in service for a nitrox system should be checked for oil and hydrocarbon contamination at least quarterly.

Fill Station Components

- All components of a nitrox fill station that will contact nitrox mixtures containing greater than 40% oxygen should be cleaned and maintained for oxygen service. This includes cylinders, whips, gauges, valves, and connecting lines.
SECTION 7.00 Other Diving Technology

Certain types of diving, some of which are listed below, require equipment or procedures, which require additional training. Supplementary guidelines for these technologies are in development by the AAUS. The Consortium divers using these technologies must follow the guidelines approved by the DCB. Divers shall comply with all scuba diving procedures in this manual unless specified otherwise.

BLUE WATER DIVING
No diver shall plan or conduct blue water dives without prior approval of the DCB. Blue water diving is defined as diving in open water where the bottom is generally >200 feet deep. It requires special training and the use of multiple-tethered diving techniques. Specific guidelines that should be followed are outlined in "Blue Water Diving Guidelines" (California Sea Grant Publ. No. T-CSGCP-014).

ICE AND POLAR DIVING
No diver shall plan or conduct ice or polar dives without prior approval of the DCB. Divers planning to dive under ice or in polar conditions should use the following: "Guidelines for Conduct of Research Diving", National Science Foundation, Division of Polar Programs, 1990 & Lang, M.A. and M.D.J. Sayer (eds.) 2007. Proceedings of the International Polar Diving Workshop. Svalbard, 213 pp.

OVERHEAD ENVIRONMENTS
No diver shall plan or conduct dives within overhead environments without meeting current AAUS standards and prior approval of the DCB. Where an enclosed or confined space is not large enough for two divers, a diver shall be stationed at the underwater point of entry and an orientation line shall be used.

STAGED DECOMPRESSION DIVING
Decompression diving shall be defined as any diving during which the diver cannot perform a direct return to the surface without performing a mandatory decompression stop to allow the release of inert gas from the diver’s body. No diver shall plan or conduct staged decompression dives without meeting current AAUS standards and approval from DCB.

HOOKAH
No diver shall plan or conduct hookah dives without prior approval of the DCB.
   1. Divers using the hookah mode shall be equipped with a diver-carried independent reserve breathing gas supply.
   2. Each hookah diver shall be hose-tended by a separate dive team member while in the water.
   3. The hookah breathing gas supply shall be sufficient to support all hookah divers in the water for the duration of the planned dive, including decompression.

SURFACE SUPPLIED DIVING
Surface supplied divers shall comply with all scuba diving procedures in this manual (except Section 2.31). Surface supplied diving shall not be conducted at depths greater than 190 fsw (58 msw). No diver shall plan or conduct surface supplied dives without prior approval of the DCB.
A. Divers using the surface supplied mode shall be equipped with a diver-carried independent reserve breathing gas supply.
B. Each surface supplied diver shall be hose-tended by a separate dive team member while in the water.
C. Divers using the surface supplied mode shall maintain voice communication with the surface tender.
D. The surface supplied breathing gas supply shall be sufficient to support all surface supplied divers in the water for the duration of the planned dive, including decompression.
E. During surface supplied diving operations when only one diver is in the water, there must be a standby diver in attendance at the dive location.

MIXED GAS DIVING
Mixed gas diving is defined as dives done while breathing gas mixes containing proportions greater than 1% by volume of an inert gas other than nitrogen. No diver shall plan or conduct mixed gas dives without meeting current AAUS standards and prior approval of the DCB.

DRYSUIT DIVING
All UCD divers diving with drysuits under the auspices of UCD must demonstrate diving proficiency with a drysuit before diving in the ocean without direct supervision.

DIVE COMPUTERS
All UCD divers using dive computers while diving under the auspices of UCD shall be proficient with the use of their dive computer and follow the UCD Dive Computer Recommendation available on the UCD Dive Safety website.

ALTITUDE DIVING
Divers planning to dive at sites with elevations greater than 1000ft must have specialized training (*see UCD Altitude Diving Manual or NOAA Dive Manual Chapter 10) and prior approval of the DCB.

OFFSHORE PLATFORM DIVING
Divers planning around or near an offshore platform structure shall have prior approval of the DCB. Offshore platform diving recommendations are available on Dive Safety website.

SCIENTIFIC CAVE AND CAVERN DIVING
No diver shall plan or conduct dives within a cave and/or cavern without meeting current AAUS standards prior approval of the DCB.

REBREATHERS
No diver shall plan or conduct dives within a rebreather without meeting current AAUS standards and prior approval of the DCB.

AQUARIUM DIVING
No diver shall plan or conduct dives within an aquarium environment without prior approval of the DCB.
TO THE EXAMINING PHYSICIAN:

This person, _____________________, requires a medical examination to assess their fitness for certification as a Scientific Diver for the University of California, Davis. Their answers on the Diving Medical History Form (attached) may indicate potential health or safety risks as noted. Your evaluation is requested on the attached scuba Diving Fitness Medical Evaluation Report. If you have questions about diving medicine, you may wish to consult one of the references on the attached list or contact one of the physicians with expertise in diving medicine whose names and phone numbers appear on an attached list, the Undersea Hyperbaric and Medical Society, or the Divers Alert Network. Please contact the undersigned Diving Safety Officer if you have any questions or concerns about diving medicine or the University of California, Davis standards. Thank you for your assistance.

Jason S Herum
Diving Safety Officer
(707) 875-2032

Scuba and other modes of compressed-gas diving can be strenuous and hazardous. A special risk is present if the middle ear, sinuses, or lung segments do not readily equalize air pressure changes. The most common cause of distress is eustachian insufficiency. Recent deaths in the scientific diving community have been attributed to cardiovascular disease. Please consult the following list of conditions that usually restrict candidates from diving.
(Adapted from Bove, 1998: bracketed numbers are pages in Bove)

CONDITIONS WHICH MAY DISQUALIFY CANDIDATES FROM DIVING
1. Abnormalities of the tympanic membrane, such as perforation, presence of a monomeric membrane, or inability to autoinflate the middle ears. [5, 7, 8, 9]
2. Vertigo, including Meniere’s Disease. [13]
4. Recent ocular surgery. [15, 18, 19]
5. Psychiatric disorders including claustrophobia, suicidal ideation, psychosis, anxiety states, untreated depression. [20 - 23]
6. Substance abuse, including alcohol. [24 - 25]
7. Episodic loss of consciousness. [1, 26, 27]
8. History of seizure. [27, 28]
9. History of stroke or a fixed neurological deficit. [29, 30]
10. Recurring neurologic disorders, including transient ischemic attacks. [29, 30]
11. History of intracranial aneurysm, other vascular malformation or intracranial hemorrhage. [31]
12. History of neurological decompression illness with residual deficit. [29, 30]
13. Head injury with sequelae. [26, 27]
14. Hematologic disorders including coagulopathies. [41, 42]
15. Evidence of coronary artery disease or high risk for coronary artery disease. [33 - 35]
16. Atrial septal defects. [39]
17. Significant valvular heart disease - isolated mitral valve prolapse is not disqualifying. [38]
18. Significant cardiac rhythm or conduction abnormalities. [36 - 37]
19. Implanted cardiac pacemakers and cardiac defibrillators (ICD). [39, 40]
20. Inadequate exercise tolerance. [34]
21. Severe hypertension. [35]
22. History of spontaneous or traumatic pneumothorax. [45]
23. Asthma. [42 - 44]
24. Chronic pulmonary disease, including radiographic evidence of pulmonary blebs, bullae, or cysts. [45,46]
25. Diabetes mellitus. [46 - 47]
26. Pregnancy. [56]

APPENDIX 2
AAUS MEDICAL EVALUATION OF FITNESS FOR SCUBA DIVING REPORT

Name of Applicant (Print or Type) _____________________________ Date of Medical Evaluation (Month/Day/Year) ____________________________

To The Examining Physician: Scientific divers require periodic scuba diving medical examinations to assess their fitness to engage in diving with self-contained underwater breathing apparatus (scuba). Their answers on the Diving Medical History Form may indicate potential health or safety risks as noted. Scuba diving is an activity that puts unusual stress on the individual in several ways. Your evaluation is requested on this Medical Evaluation form. Your opinion on the applicant's medical fitness is requested.

Scuba diving requires heavy exertion. The diver must be free of cardiovascular and respiratory disease (see references, following page). An absolute requirement is the ability of the lungs, middle ears and sinuses to equalize pressure. Any condition that risks the loss of consciousness should disqualify the applicant. Please proceed in accordance with the AAUS Medical Standards (Sec. 5.00). If you have questions about diving medicine, please consult with the Undersea Hyperbaric Medical Society or Divers Alert Network.

TESTS: THE FOLLOWING TESTS ARE REQUIRED:

DURING ALL INITIAL AND PERIODIC RE-EXAMS (UNDER AGE 40):
- Medical history
- Complete physical exam, with emphasis on neurological and otological components
- Urinalysis
- Any further tests deemed necessary by the physician

ADDITIONAL TESTS DURING FIRST EXAM OVER AGE 40 AND PERIODIC RE-EXAMS (OVER AGE 40):
- Chest x-ray (Required only during first exam over age 40)
- Resting EKG
- Assessment of coronary artery disease using Multiple-Risk-Factor Assessment¹ (age, lipid profile, blood pressure, diabetic screening, smoking)
  Note: Exercise stress testing may be indicated based on Multiple-Risk-Factor Assessment¹

PHYSICIAN'S STATEMENT:

______ 01 Diver IS medically qualified to dive for: 2 years (over age 60) 3 years (age 40-59) 5 years (under age 40)

______ 02 Diver IS NOT medically qualified to dive: Permanently Temporarily.

I have evaluated the above mentioned individual according to the tests listed above. I have discussed with the patient any medical condition(s) that would not disqualify him/her from diving but which may seriously compromise subsequent health. The patient understands the nature of the hazards and the risks involved in diving with these conditions.

APPENDIX 3
DIVING MEDICAL HISTORY FORM
(To Be Completed By Applicant-Diver)

Name ______________________________________  DOB ____ Age ___ Wt.___ Ht. ___
Sponsor ____________________________________________ Date ___/___/___
(Dept./Project/Program/School, etc.)                   (Mo/Day/Yr)

TO THE APPLICANT:
Scuba diving places considerable physical and mental demands on the diver. Certain medical and physical
requirements must be met before beginning a diving or training program. Your accurate answers to the questions
are more important, in many instances, in determining your fitness to dive than what the physician may see, hear
or feel as part of the diving medical certification procedure.
This form must be kept confidential by the examining physician. If you believe any question amounts to
invasion of your privacy, you may elect to omit an answer, provided that you must subsequently discuss that
matter with your own physician who must then indicate, in writing, that you have done so and that no health hazard
exists.
Should your answers indicate a condition, which might make diving hazardous, you will be asked to review the
matter with your physician. In such instances, their written authorization will be required in order for further
consideration to be given to your application. If your physician concludes that diving would involve undue risk for
you, remember that they are concerned only with your well-being and safety.

APPENDIX 4
DEFINITION OF TERMS

Air sharing - Sharing of an air supply between divers.
ATA(s) - “Atmospheres Absolute”, Total pressure exerted on an object, by a gas or mixture of gases, at a specific depth or elevation, including normal atmospheric pressure.
Alternate Gas Supply - Fully redundant system capable of providing a gas source to the diver should their primary gas supply fail.
Authorization - The DCB authorizes divers to dive using specialized modes of diving, and the depth they may dive to.
Breath-hold Diving - A diving mode in which the diver uses no self-contained or surface-supplied air or oxygen supply.
Bubble Check - Visual examination by the dive team of their diving systems, looking for O-ring leaks or other air leaks conducted in the water prior to entering a cave. Usually included in the "S" Drill.
Buddy Breathing - Sharing of a single air source between divers.
Buddy System - Two comparably equipped scuba divers in the water in constant communication.
Buoyant Ascent - An ascent made using some form of positive buoyancy.
Cave Dive - A dive, which takes place partially or wholly underground, in which one or more of the environmental parameters defining a cavern dive are exceeded.
Cavern Dive - A dive which takes place partially or wholly underground, in which natural sunlight is continuously visible from the entrance.
Certified Diver - A diver who holds a recognized valid certification from an AAUS OM or internationally recognized certifying agency.
(Scientific Diver) Certification - A diver who holds a recognized valid certification from an AAUS OM.
Controlled Ascent - Any one of several kinds of ascents including normal, swimming, and air sharing ascents where the diver(s) maintain control so a pause or stop can be made during the ascent.
Cylinder - A pressure vessel for the storage of gases.
Decompression Sickness - A condition with a variety of symptoms, which may result from gas, and bubbles in the tissues of divers after pressure reduction.
Designated Person-In-Charge - Surface Supplied diving mode manning requirement. An individual designated by the OM DCB or designee with the experience or training necessary to direct, and oversee in the surface supplied diving operation being conducted.
Dive - A descent into the water, an underwater diving activity utilizing compressed gas, an ascent, and return to the surface.
Dive Computer - A microprocessor based device which computes a diver’s theoretical decompression status, in real time, by using pressure (depth) and time as input to a
decompression model, or set of decompression tables, programmed into the device.

\textit{Dive Location} - A surface or vessel from which a diving operation is conducted.

\textit{Dive Site} - Physical location of a diver during a dive.

\textit{Dive Table} - A profile or set of profiles of depth-time relationships for ascent rates and breathing mixtures to be followed after a specific depth-time exposure or exposures.

\textit{Diver} – A person who stays underwater for long periods by having compressed gas supplied from the surface or by carrying a supply of compressed gas.

\textit{Diver-In-Training} - An individual gaining experience and training in additional diving activities under the supervision of a dive team member experienced in those activities.

\textit{Diving Mode} - A type of diving required specific equipment, procedures, and techniques, for example, snorkel, scuba, surface-supplied air, or mixed gas.

\textit{Diving Control Board (DCB)} - Group of individuals who act as the official representative of the membership organization in matters concerning the scientific diving program (See Diving Control Board under Section 1.0).

\textit{Diving Safety Officer (DSO)} - Individual responsible for the safe conduct of the scientific diving program of the membership organization (See Diving Safety Officer under Section 1.0).

\textit{DPIC} – See Designated Person-In-Charge.

\textit{EAD} - Equivalent Air Depth (see below).

\textit{Emergency Swimming Ascent} - An ascent made under emergency conditions where the diver may exceed the normal ascent rate.

\textit{Enriched Air (EANx)} - A name for a breathing mixture of air and oxygen when the percent of oxygen exceeds 21%. This term is considered synonymous with the term “nitrox” (Section 6.00).

\textit{Equivalent Air Depth (EAD)} - Depth at which air will have the same nitrogen partial pressure as the nitrox mixture being used. This number, expressed in units of feet seawater or saltwater, will always be less than the actual depth for any enriched air mixture.

\textit{Flooded Mine Diving} - Diving in the flooded portions of a man-made mine. Necessitates use of techniques detailed for cave diving.

\textit{fO}_2 - Fraction of oxygen in a gas mixture, expressed as either a decimal or percentage, by volume.

\textit{FSW} - Feet of seawater.

\textit{Gas Management} - Gas planning rule which is used in cave diving environments in which the diver reserves a portion of their available breathing gas for anticipated emergencies (See Rule of Thirds, Sixths).

\textit{Gas Matching} – The technique of calculating breathing gas reserves and turn pressures for divers using different volume cylinders. Divers outfitted with the same volume cylinders may employ the Rule of Thirds for gas management purposes. Divers outfitted with different volume cylinders will not observe the same gauge readings when their cylinders contain the same gas volume, therefore the Rule of Thirds will not guarantee adequate reserve if both divers must breathe from a single gas volume at a Rule of Thirds turn pressure. Gas Matching is based on individual consumption rates in volume consumed per minute. It allows divers to
calculate turn pressures based on combined consumption rates and to convert the required reserve to a gauge based turn pressure specific to each diver’s cylinder configuration.

**Guideline** - Continuous line used as a navigational reference during a dive leading from the team position to a point where a direct vertical ascent may be made to the surface.

**Hookah** - While similar to Surface Supplied in that the breathing gas is supplied from the surface by means of a pressurized hose, the supply hose does not require a strength member, pneumofathometer hose, or communication line. Hookah equipment may be as simple as a long hose attached to a standard scuba cylinder supplying a standard scuba second stage. The diver is responsible for the monitoring his/her own depth, time, and diving profile.

**Hyperbaric Chamber** - See Recompression chamber.

**Hyperbaric Conditions** - Pressure conditions in excess of normal atmospheric pressure at the dive location.

**Independent Reserve Breathing Gas** - A diver-carried independent supply of air or mixed gas (as appropriate) sufficient under standard operating conditions to allow the diver to reach the surface, or another source of breathing gas, or to be reached by another diver.

**Jump/Gap Reel** - Spool or reel used to connect one guide line to another thus ensuring a continuous line to the exit.

**Life Support Equipment** – Underwater equipment necessary to sustain life.

**Lead Diver** - Certified scientific diver with experience and training to conduct the diving operation.

**Organizational Member (OM)** - An organization which is a current member of the AAUS, and which has a program, which adheres to the standards of the AAUS as, set forth in the *AAUS Manual*.

**Manifold with Isolator Valve** - A manifold joining two diving cylinders, that allows the use of two completely independent regulators. If either regulator fails, it may be shut off, allowing the remaining regulator access to the gas in both of the diving cylinders.

**Mixed Gas** - Breathing gas containing proportions of inert gas other than nitrogen greater than 1% by volume.

**Mixed Gas Diving** - A diving mode in which the diver is supplied in the water with a breathing gas other than air.

**MOD** - Maximum Operating Depth, usually determined as the depth at which the pO₂ for a given gas mixture reaches a predetermined maximum.

**Nitrox** - Any gas mixture comprised predominately of nitrogen and oxygen, most frequently containing between 22% and 40% oxygen. Also be referred to as Enriched Air Nitrox, abbreviated EAN.

**Normal Ascent** - An ascent made with an adequate air supply at a rate of 30 feet per minute or less.

**OTU** - Oxygen Toxicity Unit

**Oxygen Compatible** - A gas delivery system that has components (O-rings, valve seats, diaphragms, etc.) that are compatible with oxygen at a stated pressure and temperature.

**Oxygen Service** - A gas delivery system that is both oxygen clean and oxygen compatible.
Oxygen Toxicity - Any adverse reaction of the central nervous system ("acute" or "CNS" oxygen toxicity) or lungs ("chronic", "whole-body", or "pulmonary" oxygen toxicity) brought on by exposure to an increased (above atmospheric levels) partial pressure of oxygen.

Penetration Distance - Linear distance from the entrance intended or reached by a dive team during a dive at a dive site.

Pressure-Related Injury - An injury resulting from pressure disequilibrium within the body as the result of hyperbaric exposure. Examples include: decompression sickness, pneumothorax, mediastinal emphysema, air embolism, subcutaneous emphysema, or ruptured eardrum.

Pressure Vessel - See cylinder.

$pO_2$ - Inspired partial pressure of oxygen, usually expressed in units of atmospheres absolute.

Primary Reel - Initial guideline used by the dive team from open water to maximum penetration or a permanently installed guideline.

Psi - Unit of pressure, "pounds per square inch.

Psig - Unit of pressure, "pounds per square inch gauge.

Recompression Chamber - A pressure vessel for human occupancy. Also called a hyperbaric chamber or decompression chamber.

Restriction - Any passage through which two divers cannot easily pass side by side while sharing air.

Rule of Thirds - Gas planning rule which is used in cave diving environments in which the diver reserves 2/3's of their breathing gas supply for exiting the cave or cavern.

Rule of Sixths - Air planning rule which is used in cave or other confined diving environments in which the diver reserves 5/6's of their breathing gas supply (for DPV use, siphon diving, etc.) for exiting the cave or cavern.

Safety Drill - ("S" Drill) - Short gas sharing, equipment evaluation, dive plan, and communication exercise carried out prior to entering a cave or cavern dive by the dive team.

Safety Reel - Secondary reel used as a backup to the primary reel, usually containing 150 feet of guideline that is used in an emergency.

Safety Stop – A stop made between 15-20 feet (5-6 meters) for 3-5 minutes during the final ascent phase of a dive.

Scientific Diving - Scientific diving is defined (29CFR1910.402) as diving performed solely as a necessary part of a scientific, research, or educational activity by employees whose sole purpose for diving is to perform scientific research tasks.

Scuba Diving - A diving mode independent of surface supply in which the diver uses open circuit self-contained underwater breathing apparatus.

Side Mount - A diving mode utilizing two independent SCUBA systems carried along the sides of the diver's body; either of which always has sufficient air to allow the diver to reach the surface unassisted.

Siphon - Cave into which water flows with a generally continuous in-current.

Standby Diver - A diver at the dive location capable of rendering assistance to a diver in the water.
**Surface Supplied Diving** - Surface Supplied: Dives where the breathing gas is supplied from the surface by means of a pressurized umbilical hose. The umbilical generally consists of a gas supply hose, strength member, pneumofathometer hose, and communication line. The umbilical supplies a helmet or full-face mask. The diver may rely on the tender at the surface to keep up with the divers’ depth, time and diving profile.

**Swimming Ascent** - An ascent, which can be done under normal or emergency conditions accomplished by simply swimming to the surface.

**Tender** - Used in Surface supplied and tethered diving. The tender comprises the topsides buddy for the in-water diver on the other end of the tether. The tender must have the experience or training to perform the assigned tasks in a safe and healthful manner.

**Turn Pressure** – The gauge reading of a diver’s open circuit scuba system designating the gas limit for terminating the dive and beginning the exit from the water.

**Umbilical** - Composite hose bundle between a dive location and a diver or bell, or between a diver and a bell, which supplies a diver or bell with breathing gas, communications, power, or heat, as appropriate to the diving mode or conditions, and includes a safety line between the diver and the dive location.
APPENDIX 5

UCD/AAUS REQUEST FOR DIVING RECIPROCITY FORM
VERIFICATION OF DIVER TRAINING AND EXPERIENCE

Diver: ________________________________                                                        Date: _______________

This letter serves to verify that the above listed person has met the training and pre-requisites as indicated below, and has completed all requirements necessary to be certified as a (Scientific Diver / Diver in Training) as established by the (Organizational Member) Diving Safety Manual, and has demonstrated competency in the indicated areas. (Organizational Member) is an AAUS OM and meets or exceeds all AAUS training requirements.

The following is a brief summary of this diver’s personnel file regarding dive status at ____________

(Date)

Original diving authorization
Written scientific diving examination
Last diving medical examination
Medical examination expiration date
Most recent checkout dive
Scuba regulator/equipment service/test
CPR training (Agency)
CPR Exp.
Oxygen administration (Agency)
02 Exp.
First aid for diving
F.A. Exp.
Date of last dive
Depth

Number of dives completed within previous 12 months?
Depth Authorization feet

Total number of career dives?

Any restrictions or Waivers of Requirements? (Y/N) if yes, explain:

Please indicate any pertinent authorizations or training:

APPENDIX 6
UC DAVIS
DIVING EMERGENCY MANAGEMENT PROCEDURES

Introduction
A diving accident victim could be any person who has been breathing compressed gas underwater regardless of depth. It is essential that emergency procedures are pre-planned and that medical treatment be initiated as soon as possible. It is the responsibility of each dive project lead diver or dive supervisor to develop procedures for diving emergencies including evacuation and medical treatment for each dive location.

General Procedures
Depending on, and according to, the nature of the diving accident, stabilize the patient, administer 100% oxygen, contact local Emergency Medical System (EMS) for transport to medical facility, contact diving accident coordinator as appropriate. Explain the circumstances of the dive incident to the evacuation teams, medics and physicians. Do not assume that they understand why 100% oxygen may be required for the diving accident victim or that recompression treatment may be necessary.

1. Make appropriate contact with victim, rescue as required.
2. Establish ABCs (Airway, Breathing, Circulation) or CAB as appropriate.
3. Call local Emergency Medical System (911 in the most of US) for transport to nearest medical treatment facility.
4. Administer 100% oxygen, if appropriate (in suspected cases of decompression illness, barotrauma, shock, or near drowning).
5. Call UC Davis Occupational Health at (530) 797-6691 for advice and to coordinate possible hospital to chamber transportation. They will need to know: Destination of the ambulance, telephone number at the ambulance's destination, patient's signs and symptoms, first aid administered, patient's name, age, sex, usual physical condition, what happened and any contributing factors involved or suspected.
6. Contact DSO Jason Herum (work 707-875-2032, cell 707-774-5052) or his designee.
7. If the injured person is diving under UC Davis auspices, a report must also be made to UCD's Workman's Compensation carrier within 24 hours. Report to your Department Personnel Manager. At BML contact (707) 875-2011, Fax (707) 875-2009.
8. Complete and submit AAUS Incident Report Form (Appendix 8 of the Diving Safety Manual) to the UCD Diving Control Board (As required in Section 2.72).

List additional emergency contact numbers appropriate for dive location:
(See Appendix 7A and 7B for local emergency contact information)

- Divers Alert Network (DAN) 24 hour EMERGENCIES (919) 684-9111
- DAN non-emergency medical information (919) 684-2948 or 1-800-446-2671
- DAN Website www.diversalertnetwork.org

Report any diving-related accident and/or injury to the DSO and Dr. Paisley immediately.

Dive teams must have an oxygen unit and first aid kit available.

Oxygen units and a small first aid kit are stored in the BML Scuba Fill Station.
Research vessels must have a VHF radio, or some other form of communication with shore,
and all other USCG, State & UC required safety equipment on board when underway.

TRG Research Vessel Descriptions:
R/V John Le Conte - 37’ aluminum cabin/hull with ‘A’ frame
# CF 1288 XS Radio Call Sign WYK 3721

R/V Bob Richards - 27’ aluminum cabin/hull (Munson)
# CF 9519 XS

There is an oxygen unit at the Tahoe City Hatchery scuba locker and it must be taken to all dive sites and returned to the hatchery after use. Each vessel contains a small first aid kit.
APPENDIX 7
AAUS STATISTICS COLLECTION CRITERIA AND DEFINITIONS

COLLECTION CRITERIA:
The "Dive Time in Minutes", The Number of Dives Logged", and the "Number of Divers Logging Dives" will be collected for the following categories.

- Dive Classification
- Breathing Gas
- Diving Mode
- Decompression Planning and Calculation Method
- Depth Ranges
- Specialized Environments
- Incident Types

Dive Time in Minutes is defined as the surface-to-surface time including any safety or required decompression stops.

A Dive is defined as a descent underwater utilizing compressed gas and subsequent ascent/return to the surface with a minimum surface interval of 10 minutes.

Dives will not be differentiated as open water or confined water dives. But open water and confined water dives will be logged and submitted for AAUS statistics classified as either scientific or training/proficiency.

A "Diver Logging a Dive" is defined as a person who is diving under the auspices of your scientific diving organization. Dives logged by divers from another AAUS Organization will be reported with the diver’s home organization. Only a diver who has actually logged a dive during the reporting period is counted under this category.

Incident(s) that occur during the collection cycle: Only incidents that occurred during, or resulting from, a dive where the diver is breathing a compressed gas will be submitted to AAUS.

DEFINITIONS:
Dive Classification:

- Scientific Dives: Dives that meet the scientific diving exemption as defined in 29 CFR 1910.402. Diving tasks traditionally associated with a specific scientific discipline are considered a scientific dive. Construction and trouble-shooting tasks traditionally associated with commercial diving are not considered a scientific dive.

- Training and Proficiency Dives: Dives performed as part of a scientific diver-training program, or dives performed in maintenance of a scientific diving certification/authorization.
Breathing Gas:
- Air: Dives where the bottom gas used for the dive is air.
- Nitrox: Dives where the bottom gas used for the dive is a combination of nitrogen and oxygen percentages different from those of air.
- Mixed Gas: Dives where the bottom gas used for the dive is a combination of oxygen, nitrogen, and helium (or other inert gas), or any other breathing gas combination not classified as air or nitrox.

Diving Mode:
- Open Circuit SCUBA: Dives where the breathing gas is inhaled from a self-contained underwater breathing apparatus and all of the exhaled gas leaves the breathing loop.
- Surface Supplied: Dives where the breathing gas is supplied from the surface by means of a pressurized umbilical hose. The umbilical generally consists of a gas supply hose, strength member, pneumofathometer hose, and communication line. The umbilical supplies a helmet or full-face mask. The diver may rely on the tender at the surface to monitor the divers’ depth, time, and diving profile.
- Hookah: While similar to Surface Supplied in that the breathing gas is supplied from the surface by means of a pressurized hose, the supply hose does not require a strength member, pneumofathometer hose, or communication line. Hookah equipment may be as simple as a long hose attached to a standard scuba cylinder supplying a standard scuba second stage. The diver is responsible for monitoring his/her own depth, time, and diving profile.
- Rebreathers: Dives where the breathing gas is repeatedly recycled in a breathing loop. The breathing loop may be fully closed or semi-closed. Note: A rebreather dive ending in an open circuit bailout is still logged as a rebreather dive.

Decompression Planning and Calculation Method:
- Dive Tables
- Dive Computer
- PC Based Decompression Software

Depth Ranges:
Depth ranges for sorting logged dives are: 0-30, 31-60, 61-100, 101-130, 131-150, 151-190, 191-250, 251-300, and 301->. Depths are in feet seawater (when measured in meters: 0-10, >10-30, >30-40, >40-45, >45-58, >58-76, >76-92, and >92->). A dive is logged to the maximum depth reached during the dive. Note: Only "The Number of Dives Logged" and "The Number of Divers Logging Dives" will be collected for this category.
Specialized Environments:

- Required Decompression: Any dive where the diver exceeds the no-decompression limit of the decompression planning method being employed.
- Overhead Environments: Any dive where the diver does not have direct access to the surface due to a physical obstruction.
- Blue Water Diving: Openwater diving where the bottom is generally greater than 200 feet deep and requires the use of multiple-tethers diving techniques.
- Ice and Polar Diving: Any dive conducted under ice or in polar conditions. Note: An Ice Dive would also be classified as an Overhead Environment dive.
- Saturation Diving: Excursion dives conducted as part of a saturation mission are to be logged by "classification", "mode", "gas", etc. The "surface" for these excursions is defined as leaving and surfacing within the Habitat. Time spent within the Habitat or chamber must not be logged by AAUS.
- Aquarium: An aquarium is a shallow, confined body of water, which is operated by or under the control of an institution and is used for the purposes of specimen exhibit, education, husbandry, or research (Not a swimming pool).

Incident Types:

- Hyperbaric: Decompression Sickness, AGE, or other barotrauma requiring recompression therapy.
- Barotrauma: Barotrauma requiring medical attention from a physician or medical facility, but not requiring recompression therapy.
- Injury: Any non-barotrauma injury occurring during a dive that requires medical attention from a physician or medical facility.
- Illness: Any illness requiring medical attention that can be attributed to diving.
- Near Drowning/ Hypoxia: An incident where a person asphyxiates to the minimum point of unconsciousness during a dive involving a compressed gas. But the person recovers.
- Hyperoxic/Oxygen Toxicity: An incident that can be attributed to the diver being exposed to too high a partial pressure of oxygen.
- Hypercapnea: An incident that can be attributed to the diver being exposed to an excess of carbon dioxide.
- Fatality: Any death accruing during a dive or resulting from the diving exposure.
- Other: An incident that does not fit one of the listed incident types

Incident Classification Rating Scale:

- Minor: Injuries that the OM considers being minor in nature. Examples of this classification of incident would include, but not be limited to:
• Mask squeeze that produced discoloration of the eyes.
• Lacerations requiring medical attention but not involving moderate or severe bleeding.
• Other injuries that would not be expected to produce long term adverse effects on the diver’s health or diving status.

• Moderate: Injuries that the OM considers being moderate in nature. Examples of this classification would include, but not be limited to:
  ▪ DCS symptoms that resolved with the administration of oxygen, hyperbaric treatment given as a precaution.
  ▪ DCS symptoms resolved with the first hyperbaric treatment.
  ▪ Broken bones.
  ▪ Torn ligaments or cartilage.
  ▪ Concussion.
  ▪ Ear barotrauma requiring surgical repair.

• Serious: Injuries that the OM considers being serious in nature. Examples of this classification would include, but not be limited to:
  ▪ Arterial Gas Embolism.
  ▪ DCS symptoms requiring multiple hyperbaric treatment.
  ▪ Near drowning.
  ▪ Oxygen Toxicity.
  ▪ Hypercapnea.
  ▪ Spinal injuries.
  ▪ Heart attack.
  ▪ Fatality.
APPENDIX 8

Recommendations For Rescue Of A Submerged Unresponsive Compressed-Gas Diver

- Diver found unresponsive at depth
  - Regulator in mouth?
    - YES: Maintain regulator in mouth
      - Currently convulsing?
        - YES: Wait for convulsion to finish
        - NO: Ascent unduly hazardous for rescuer?
          - YES: Make victim positively buoyant and send to surface
          - NO: Head in neutral position. Ascend according to training agency recommendations.
    - NO: At surface turn face up and establish positive buoyancy.
  - NO: Is immediate assisted removal from water possible?
    - YES: Give 2 rescue breaths and assess surface support availability
      - Surface support < 5 minutes away?
        - YES: Tow victim or wait whilst administering intermittent rescue breaths
        - NO: Remain in place giving rescue breaths for approximately 1 minute, then tow (without breaths) to nearest surface support
    - NO: Remove victim from water and initiate CPR if indicated
